

COMMUNICATION ENVIRONMENTAL PERFORMANCE TO INTERESTED PARTIES 2022

MATINSA, with a firm commitment to transparency, place at the disposal of interested parties information on the organisation's environmental performance.

Every year, MATINSA provides data on Resource consumption and environmental management to the FCC Group for inclusion in the group's sustainability report. Thus, this report includes the organisation's data together with those provided by other companies in the group.

In addition, during the year 2022, MATINSA developed environmental management programmes in all its work centres aimed at improving the environment and reducing consumption. We can indicate that during the year 2022:

- A progressive adaptation of installations was carried out to replace traditional lighting with LEDs.
- A total of almost 47 Tn eq/CO₂ were estimated:
 - 12,01 Tn eq/CO₂ avoided by reusing road milling waste or earth from ditch cleaning.
 - 34,74 Tn eq/CO₂ from the replacement of fossil fuel vehicles with hybrid or electric vehicles.
- Vehicle fuel consumption (diesel) was reduced by more than 300.000 litres.
- The generation of bituminous mix waste (milling waste) was reduced by 8.600 tonnes. An important part of this reduction was due to the reuse in the activities of the own centres (improvements in Service roads and others). The generation of mixed construction waste has also been reduced by approximately 3.000 tonnes. And pruning waste by just over 5.000 tonnes.
